DON'T JUST CREATE  
AN AV FISTULA,  
**MAKE A  
DIFFERENCE**

**WavelinQ™**  
EndoAVF System

# NON-SURGICAL AV FISTULA CREATION

For far too long, hemodialysis access creation options for your patients have been limited. The WavelinQ™ EndoAVF System is designed to change that by providing a truly flexible, minimally-invasive procedural option for arteriovenous fistula creation.

Two thin, flexible, magnetic catheters are inserted into an artery and vein in the arm through small punctures or incisions.

When placed in proximity, the magnets in each catheter attract to each other, pulling the vessels together and aligning the RF electrode.

4F Rapid Exchange Arterial Catheter  
4F Rapid Exchange Venous Catheter

The venous catheter, which contains the electrode, delivers RF energy to create a connection between the artery and vein. Then, the catheters are removed.

A brachial vein embolization is then recommended to divert more flow through the perforator to the superficial veins (cephalic, median cubital and/or basilic veins) for hemodialysis.

## High procedure success

88 of 91 subjects in the 4F Global Analysis had a successful EndoAVF creation confirmed via intraprocedural fistulography or by duplex ultrasound performed post-procedure<sup>1</sup>

# EXPANDING OPTIONS TO ADDRESS PATIENT NEEDS

Every patient is different, and every fistula is different. The WavelinQ™ EndoAVF System provides the flexibility to adapt your plan to help meet the unique anatomical needs of your patients by offering multiple options for access, creation, and cannulation, while also preserving future surgical AV fistula creation site options.

## High cannulation success

63 of 74 dialysis subjects in the 4F Global Analysis achieved successful 2-needle cannulation and hemodialysis through their endoAVF 6 months post-procedure<sup>1</sup>

# MORE THAN A PRODUCT A COMPLETE PROGRAM

An effective endoAVF program requires a multidisciplinary commitment to the patient journey. To help support that effort, BD provides comprehensive training, ongoing support, and the resources and tools that you need to help you be successful.

Our specialized endovascular fistula teams help educate and train you and your ultrasound team on vein mapping for WavelinQ™ EndoAVF.

Our expert physician trainers conduct procedural training using a mix of virtual technologies, simulators and hands-on demonstration and our local certified endovascular fistula specialists will in-service your full procedure team, proctor initial cases and follow up.

Our specialized dialysis team helps prepare your dialysis centers for endoAVF cannulation.

## Low catheter use

Only 4 of 25 pre-dialysis subjects in the 4F Global Analysis initiated hemodialysis with a catheter<sup>1</sup>

The WavelinQ™ EndoAVF System consists of an RF generator, two disposable magnetic catheters, and an arm board (not pictured).

Other procedural components (sold separately) include: arm board fixation straps (not pictured), electrosurgical pencil, and a grounding pad.

WavelinQ™ EndoAVF System		
Disposable Components	Description	Product Code
WavelinQ™ EndoAVF Catheters	4F Venous Catheter & 4F Arterial Catheter	<input type="checkbox"/> WQ4300
Fixation Straps	Each pack contains three straps: two 2" x 24" and one 2" x 18". Sold as a case of 10 packs	<input type="checkbox"/> TVA-MC-2
Reusable Components	Description	Product Code
WavelinQ™ Generator	Electrosurgical radiofrequency generator	<input type="checkbox"/> ESU-1
WavelinQ™ Arm Board	Radiolucent carbon fiber arm board	<input type="checkbox"/> CZ-400-TVA
